ON/OFF-ROAD RUGGED TERRAIN TIRE

▶ OPEN COUNTRY R/T TRAIL

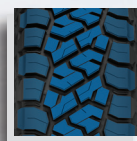

ON/OFF-ROAD RUGGED TERRAIN TIRE

The Toyo Open Country R/T Trail offers a new level of traction and comfort for light truck and SUV owners. Designed to be more aggressive than a standard all terrain tire, while offering a smoother on road driving experience compared to other off-road ready products.

In addition, the advanced compounding delivers effective wet traction, durability, and wear life. While a unique tread design coupled with an aggressive stylish sidewall ensures the Open Country R/T Trail will enhance the traction and look of any light truck or SUV.

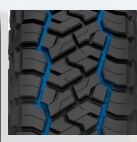

For that little extra traction and comfort when you need it most!

Features & Benefits

UNIQUE OPTIMIZED BLOCK DESIGN

>> A computer designed lateral block pattern delivers improved handling while reducing the risk of irregular wear for a more comfortable ride throughout the life of the tire.

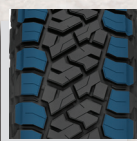

2 WIDE CIRCUMFERENTIAL GROOVES

>> Improves water and slush evacuation for better all season traction.
>> The wider grooves also increase off-road traction for better grip in mud or sand.

WIDE LATERAL ZIGZAG GROOVES

>> The wide lateral grooves help improve the evacuation of mud and sand for enhanced traction, especially in off-road conditions.

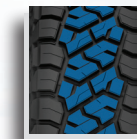

LARGE OUTER BLOCKS

>> The large outer blocks reduce irregular wear and add on-road stability while also offering extra grabbing power in off-road conditions.

VARIED PATTERN ARRANGEMENT

>> The varied block angles promote responsive handling, for better cornering, acceleration and braking.

AGGRESSIVE SIDEWALL DESIGN

>> An aggressive alternating sidewall design between scalloped and square blocks increases traction while off-road driving in mud, dirt and gravel.

DURABLE SIDEWALL

>> A thicker sidewall adds stability and improves impact and puncture resistance for a tougher tire.
>> A rim protector helps protect tire rims from curb damage.

HEAVY DUTY CONSTRUCTION

>> The polyester casing, two wide high strength steel belts and two jointless spiral cap plies add strength, rigidity and uniformity.

STONE AND MUD EJECTORS

>> Stone and mud ejectors help reduce the risk of stone drilling or mud buildup in the tire grooves.

FULL DEPTH SIPING

>> Siping adds additional biting edges on wet pavement for improved traction for the life of the tire.
